

PRIOR AUTHORIZATION CLINICAL SUBMISSION

Request Information

PA Request ID	PA-2026-0005
Submission Date	12-Aug-2026

Patient Information

Patient ID	P005
Patient Name	Michael Carter
Date of Birth	18-Jun-1958
Age / Gender	68 / Male

Insurance Information

Insurance/Payer	Aetna
Policy Type	Clinical Policy Bulletin (CPB)
Policy ID	CPB-0660
Policy Title	Knee Arthroplasty
Member ID	AET-P005-54821
Plan Type	Commercial Health Plan
Policy Expiry Date	Not stated on Aetna's current official CPB page

Diagnosis

Primary Diagnosis	Primary osteoarthritis of right knee
ICD-10-CM	M17.11
Clinical Condition	Advanced right-knee osteoarthritis with persistent pain and functional disability affecting activities of daily living.

Requested Treatment

Requested Service	Total knee arthroplasty (TKA), right knee
CPT Code	27447
Frequency	One-time surgical procedure
Place of Service	Inpatient / Hospital outpatient as clinically appropriate

Clinical Information

Clinical History	The patient has advanced right-knee osteoarthritis with persistent pain, stiffness, and reduced mobility despite non-surgical management.
Physical Findings	Right knee tenderness, crepitus, swelling, and limited range of motion are documented. Pain interferes with walking, stair climbing, and other daily activities.
Radiographic Findings	Standing knee radiographs demonstrate moderate-to-severe osteoarthritis with substantial joint-space loss consistent with advanced degenerative disease.
Conservative Treatment	The patient completed 12 weeks of documented non-surgical treatment including anti-inflammatory/analgesic medication, flexibility and strengthening exercises, activity modification, and supervised in-person physical therapy.
Additional Treatment	An assistive device has been used. Therapeutic knee injection was performed more than 12 weeks before the planned arthroplasty.
Contraindications	No active joint/systemic infection, active skin infection or open wound at the planned surgical site is documented. No corticosteroid injection has occurred within the 12 weeks before the planned procedure.

Medical Necessity

Rationale	Total knee arthroplasty is requested for advanced osteoarthritis with pain and functional disability, objective examination findings, radiographic evidence of moderate/severe disease, and documented unsuccessful conservative therapy.
